What is Credly? Credly is an AI-powered news verification platform built to identify misinformation, detect clickbait patterns, and give a transparent credibility analysis for any news article you upload — all in just a few clicks.

SECTION 1

Getting Started

Before you can analyze any article, you'll need an account. Setting one up takes less than a minute.

1 Create your account

Open the Credly sign-up page and fill in your full name, email address, and a password. Confirm your password, accept the Terms of Service and Privacy Policy, then select **Create Account**.

- Use a real, active email address — it's how you'll recover your password later.
- Passwords should be strong; the eye icon lets you double-check what you've typed.
- The Create Account button stays disabled until the terms checkbox is selected.

The Create Your Account screen

2 Sign in

Already have an account? Head to the sign-in screen, enter your Email ID and Password, and select **Sign In to Verify**. Forgotten your password? Use the "Forgot Credentials?" link below the button.

The Welcome Back sign-in screen

SECTION 2

Uploading an Article

Once you're signed in, you'll land on the Analytics tab — this is where every analysis begins.

Drag & drop or browse for a PDF on the Credibility Analyzer screen

Article guidelines

- **Upload only news articles** — the article should be news content, not ads or promotions.
- **PDF format only** — make sure your file is saved as a .pdf.
- **Max 10MB file size** — for the best performance, keep files under 10MB.
- **Readable content** — clear, text-based PDFs give the most accurate results.

Once a file is added, confirm it and select Analyze Article

Tip: Your file stays private — look for the "Secure & Private" badge next to the upload box, confirming that uploads are encrypted and not shared.

SECTION 3

Reading Your Analysis Result

After processing, Credly returns a full credibility breakdown of your article. Here's how to read every part of it.

Top of the Analysis Result screen

i Verdict & confidence

The headline verdict — "*Fake News*" or "*Real News*" — appears with a confidence percentage showing how certain the model is about that prediction.

i NLP Insights Panel

Word count, clickbait score, overall sentiment, estimated reading time, and the number of keywords detected in the article.

i AI Generated Summary & Important Keywords

A short AI-written summary of the article sits alongside the most influential keywords the model used to reach its verdict — useful for spotting exactly which words tipped the score.

Prediction distribution, confidence level and analysis details

i Prediction distribution & details

- **Prediction Distribution** — shows the Fake News vs. Real News probability split.
- **Confidence Level** — a plain-language read on how confident the classifier is.
- **Analysis Details** — file name, page count, model used (Logistic Regression), vectorizer (TF-IDF) and the exact date/time of analysis.

Reminder: Always verify important news from official and trusted sources — Credly's score is a helpful signal, not a final judgment.

SECTION 4

Analysis History

Every article you've ever analyzed is saved here, with quick filters and a running tally of your results.

The Analysis History screen

i Summary cards

At the top of the page, four cards summarize your activity at a glance.

Card	What it shows
Total Analyses	How many articles you've analyzed in total
Credible	Articles marked as credible / real news
Potentially Misleading	Articles flagged as borderline or clickbait-heavy
Not Credible	Articles classified as fake news

i Filtering & searching

Use the search bar to find a document by title or keyword, or narrow results with the **All Status**, **All Scores**, and **Select Date Range** filters above the table.

i Status badges

Each row carries a status badge so you can scan your history quickly:

Credible

Potentially Misleading

Not Credible

SECTION 5

Tips & Best Practices

A few habits that will help you get cleaner, more accurate results from the Credibility Analyzer.

1 Upload clean, text-based PDFs

Scanned images or low-resolution screenshots are harder for the model to read. Where possible, export articles directly to PDF rather than photographing or screenshotting them.

2 Stick to news content

Press releases, opinion pieces formatted as ads, or promotional material can skew the clickbait and sentiment scores. Save those for a different workflow.

3 Use history to spot patterns

If you regularly analyze articles from the same outlet, check your History tab over time — repeated "Not Credible" results from one source is a useful signal on its own.

4 Treat the score as a signal, not a verdict

Credly's confidence score is a strong starting point for further research — it works best alongside, not instead of, checking official and trusted sources.
